Canon

www.canon-europe.com/imagerunner_advance

A background image showing two business professionals in suits. One person is in the foreground, slightly out of focus, wearing a light blue suit. Another person is in the background, wearing a dark blue suit and holding a document. The scene is set in a modern office with large windows.

Colour helps the reader locate information **70%** faster.

Develop your business communication.

Documents are at the heart of business communication, connecting people with information and each other. They inform, influence and inspire. Now thanks to Canon's groundbreaking imageRUNNER ADVANCE range, document communication takes a bold step forward, enhancing the way everyone interacts.

TRANSFORMING DOCUMENT COMMUNICATION

Documents communicate ideas, formalise contracts, inspire a workforce and offer customers a first glimpse of what makes an organisation stand out. It's imperative therefore that they can be shared and published quickly and efficiently throughout an organisation. With this in mind, Canon consulted extensively with customers to develop our most advanced range of multifunctional devices to date.

COMPLEMENTING THE DOCUMENT LIFECYCLE

The imageRUNNER ADVANCE range incorporates numerous, integrated office solutions designed to complement every stage of the document lifecycle: from creation to management, output to archival, whilst supporting your security and environmental goals. The modern, sleek and compact styling sets each device apart from its contemporaries. And beneath the surface lies a depth of innovative thinking that redefines the role of a multifunctional device.

EXCEPTIONAL VERSATILITY

This extensive range incorporates devices designed to address every productivity and budgetary requirement, featuring high quality colour solutions as well as efficient black and white devices. A modular design ensures each device can be efficiently tailored to meet your specific requirements to enhance your business communications and streamline your workflows.

Progress the possibilities.

The imageRUNNER ADVANCE range simplifies office tasks and streamlines business processes to deliver rapid rewards for your business. A suite of modular colour and black and white multifunctional devices provides diversity of choice whilst a common framework makes integration into your business a seamless affair.

An integrated document solution

To enable your people to be more productive, the imageRUNNER ADVANCE range seamlessly integrates with the way you work, automating your paper intensive workflows and providing the perfect platform for document communications.

Network users benefit from timely electronic document distribution with seamless integration into systems like Microsoft® SharePoint™, Adobe®, uniFLOW and iW360. High quality colour and black and white printing is made easy thanks to impressive finishing capabilities.

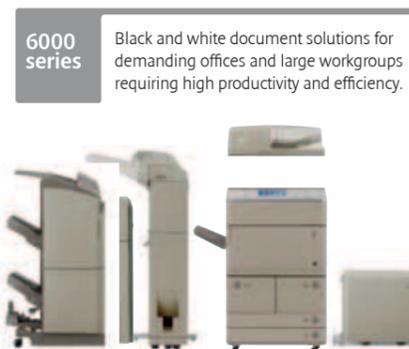

Fast deployment

The consistent thinking behind the design and development of the imageRUNNER ADVANCE range makes installation, integration and administration of even large-scale deployments, relatively simple to handle. Devices share a common look, architecture, printer driver and intuitive user interface, keeping training requirements to a minimum.

For graphic intensive environments

A new embedded controller ensures fast document processing. But for more demanding applications such as a design agency or production environment, there is a specialist controller that delivers optimum performance and outstanding colour reproduction.

Mono Devices

6000 series

Black and white document solutions for demanding offices and large workgroups requiring high productivity and efficiency.

FEATURES

- 8.4" colour touch-screen user interface
- Optional high speed duplex scanning up to 200 ipm
- Basic colour i-Send & automatic duplex as standard
- Up to 7,700 sheet Max. paper capacity
- 52 to 256gsm media weight support
- Advanced finishing (booklet & staple finishing, C & Z folding, inserting, hole punching)
- PCL 5e/6 (Standard on i models, optional on non i models)
- Optional Genuine Adobe® PostScript

6055/i **6065/i** **6075/i**

Colour Devices

C2000 series

Next generation of highly versatile entry-level office colour document solutions offering seamless workflow integration and high quality in an extremely small footprint

FEATURES

- Intuitive 5.7" user interface
- Optional duplex scanning up to 44 ipm
- Basic colour i-Send (Standard on i models, optional on L models)
- Up to 2,000 sheet paper capacity
- Flexible media handling up to 220 gsm
- PCL 5c/6 (Standard on i models, optional on L models)
- Optional Genuine Adobe® PostScript 3 (for i models only)
- SRA3 media support
- Superb print quality up to 1200dpi
- Small footprint
- Class-leading energy efficiency
- Automatic duplex as standard
- Compact inner staple finishing

C2020L/i **C2025i**

C2030L/i

C5000 series

Compact and productive colour document solutions give you the best of both worlds. High quality colour when you need it – and black and white when you don't.

FEATURES

- 8.4" tiltable colour touch-screen user interface
- Optional high speed duplex scanning up to 100 ipm
- Basic colour i-Send & automatic duplex as standard
- Up to 5,000 sheet Max. paper capacity
- 52 to 256gsm media weight support
- Range of finishing options (Compact inner or external finishing, inserting)
- PCL 5c/6 (Standard on i models, optional on non i models)
- Genuine Adobe® PostScript (Standard on C5045i/C5051i)

C5030/i **C5035/i**

C5045/i **C5051/i**

C7000 series

For demanding offices and departments requiring high productivity colour document solutions with speeds up to 65 ppm.

FEATURES

- 8.4" colour touch-screen user interface
- Optional high speed duplex scanning up to 200 ipm
- Basic colour i-Send & automatic duplex as standard
- Up to 6,900 sheet Max. paper capacity
- 52 to 300gsm media weight support
- Advanced finishing (booklet & staple finishing, C & Z folding, inserting, hole punching)
- PCL 5c/6 & Genuine Adobe® PostScript

C7055i **C7065i**

Unrivalled productivity.

Never before has a suite of document solutions enabled you to do so much with so little effort. Instantly share information with colleagues and customers. Quickly create insightful board presentations. Or transform your marketing effectiveness with professional brochures and mailshots created in minutes in your office.

CUSTOMISABLE AND EASY TO USE

A 5.7" VGA or 8.4" or 10.4" SVGA high-definition colour screen is the focal point of every device. Large, familiar icons ensure document processing is intuitive and users can easily adjust the number of buttons on screen for added simplicity.

CREATE PERSONAL WORKFLOWS

Each device allows you to easily setup personal workflows that can make common, complex, or time-consuming tasks accessible at just the touch of a button. These workflows dramatically improve productivity and can also be made available to teams or departments, allowing any user to perform them without training.

POWERFUL PERFORMANCE

When deadlines are looming or workloads intensive, the imageRUNNER ADVANCE range is in a class of its own. Native support for PCL and Genuine Adobe® Postscript 3™ ensure productive processing, even when multi-tasking. Single pass duplex scanning means scan speeds actually exceed engine speeds. And whether you're printing in colour, black and white or a combination of both, every device maintains optimum speed for maximum productivity.

QUALITY PRINTING

The imageRUNNER ADVANCE range inherits many innovations from Canon systems used in professional printing companies. A new toner, drum and choice of controllers help ensure the crispest black and white and most vibrant colour prints imaginable.

CUTTING-EDGE CREATIVITY

The possibilities to create professional looking documents to impress your customers are endless. The imageRUNNER ADVANCE range handles a variety of paper weights and sizes and provides extensive finishing capabilities, such as booklet making, document insertion, Z and C folded documents. Canon's powerful iW360 software can also be incorporated, allowing you to effortlessly combine information from various sources and formats, with "What you see is what you get" preview before creating professional-looking documents or secured PDF files.

EFFECTIVE SCANNING, ROUTING AND COLLABORATION

With the touch of a button, it's easy to securely digitise paper documents, store and send them to a multitude of destinations such as email, fax, ftp, Microsoft® SharePoint™ and iW360 Document Server. Future retrieval is aided by the searchable PDF facility that allows for specific words within a document to be located. To aid information sharing and collaboration, searchable documents can be stored in team-based document cabinets within iW360 Document Server.

DOCUMENT TRANSFORMATION

The imageRUNNER ADVANCE range embraces the latest file formats such as Office Open XML™, allowing the content within scanned documents to be easily accessed and used by other applications and business systems.

Inherent Adobe® Reader Extensions capability means that powerful Adobe® Reader functionality can be enjoyed - without the need to purchase any software licenses. This means documents can be shared and reviewed electronically instead of using slower paper-based workflows.

For example, your company's invoice approval process could be automated, with the relevant parties reviewing, creating sticky notes, and adding attachments where appropriate. The Adobe® PDF/A-1b file format enables users to save documents directly for long-term archival.

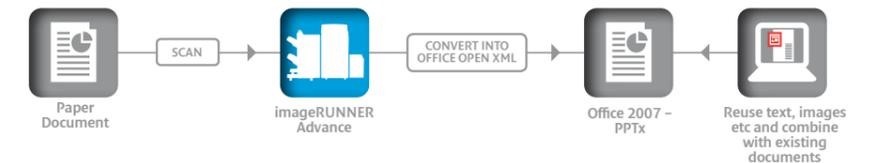

ADVANCE SPACE

An on-board and ready-to-use document repository called 'Advance Space'™ enables users to manage simple shared libraries of documents like HR forms and product brochures, making it easier to repeat-print documents.

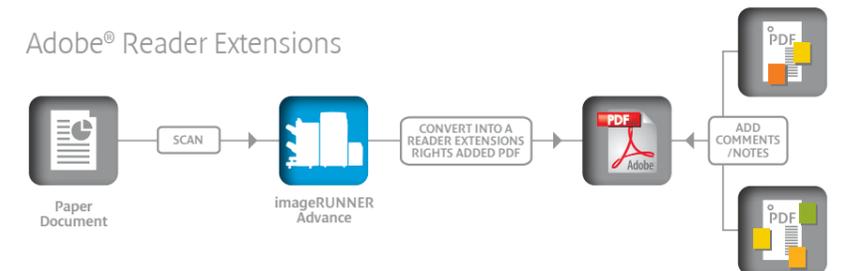

A 5.7" VGA or 8.4" or 10.4" SVGA high definition colour screen is the focal point of every device.

Office Open XML (Available on the C5000 and C7000 series only)

Adobe® Reader Extensions

The forefront of security.

The threats to document and data security have never been higher. Customer data needs protecting and network devices can be vulnerable to threats. The imageRUNNER ADVANCE series, combined with a suite of powerful software, offers a portfolio of measures designed to protect documents throughout their lifecycle – from the moment they're scanned to when they're shared, archived and printed.

DEVICE SECURITY

To prevent documents getting into the wrong hands, combine the imageRUNNER ADVANCE with Security and Cost-Control Pack or uniFLOW; these software options are designed to bring the full value of multi functional devices (MFD) to your organisation whilst providing premium document security and cost control.

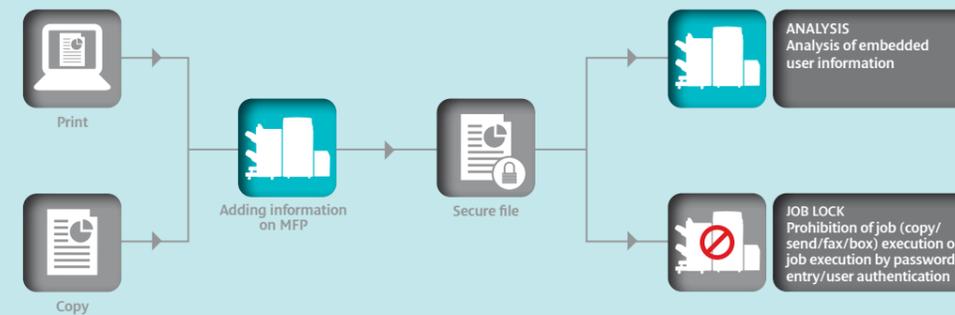

Users identify themselves, for example by using your company's login procedure or utilising a card system. Once authenticated, users gain access to all their personal settings and can print out documents that have been held securely on the device's hard drive.

The modular structure of uniFLOW and the tight integration with the imageRUNNER ADVANCE platform allows the system to be built depending on your organisation's exact requirements. By controlling both the print and scanning processes of the MFD, uniFLOW allows the IT manager to administer one system with one set of user accounts and one database. The user has a seamless interaction with the MFD; being able to access all features without learning a new interface or having to re-authenticate every time they want to use a new function. This makes the system exceptionally user-friendly and increases your organisation's security and productivity.

DATA SECURITY

Device hard disks are especially easy to remove for temporary offsite storage, heightening data security and allowing secure protection against fire risks. The device can also be configured with dual hard disks enabling data encryption (adhering to Common Criteria EAL 3) and disk drive mirroring*. This means that in the unlikely event that a drive fails, the device will continue to operate using the alternative drive, with no data loss or damage. Highly detailed logs are also held within the device and can be exported as CSV files.

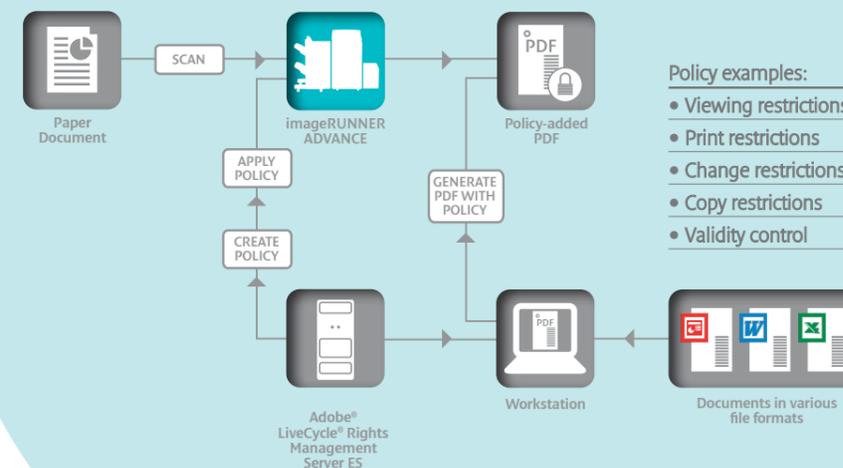

Document Scan Lock Kit*

Document security

Secure watermarks can be embedded into confidential documents, becoming prominent when someone attempts to make a copy. When scanning and sending a PDF, it can be secured so that only users with the relevant password can access it.

Integration with Adobe® Rights Management

Policy examples:

- Viewing restrictions
- Print restrictions
- Change restrictions
- Copy restrictions
- Validity control

Scan documents using your existing Adobe® Rights Management workflow to protect critical information, improve regulatory compliance and streamline business processes.

Advanced savings.

In today's challenging climate it's important to be able to take decisions that make sense now and in the future. The progressive thinking behind the imageRUNNER ADVANCE range embodies this philosophy. Here is a range that unites a sensible financial outlay, efficient running costs, superior levels of control and a new benchmark in environmental responsibility.

LOW CONSUMPTION AND EMISSIONS

Each device incorporates the world's first high-grade fire retardant bio plastic, made from plant-derived organic resources. Carbon dioxide emissions are also reduced, through the use of green materials and an environmentally conscious product design and manufacture system. Where possible, recycled plastics have also been utilised.

REDUCED ENERGY CONSUMPTION AND NOISE

imageRUNNER ADVANCE devices offer one of the lowest Typical Energy Consumption (TEC*) ratings in their class. New toner technology makes it possible to fix toner to its substrate at lower temperatures, reducing energy costs. A sleep mode cuts consumption to as low as 1.5W and noise levels are also reduced for a better working environment. Each device also conforms to the latest international environmental standards such as Energy Star and RoHS.

CUT YOUR COSTS

The imageRUNNER ADVANCE range helps you seize the initiative to reduce both energy consumption and costs. High quality document creation means that brochures and mail pieces can be produced without outsourcing to a local print shop, enabling big savings.

Duplex printing cuts paper consumption and, on a cost per print basis, could almost halve your print costs. Powerful software such as Canon's uniFLOW contributes too. Documents can be automatically routed to the network device with the lowest cost-per-page, enabling significant savings over time. Plus, secure access means documents can be "held" until users are ready to collect them at the device - preventing wastage caused by forgotten prints discarded in output trays.

SPACE-SAVING DESIGN

Each sleek device is incredibly compact for such a powerful performer. In offices where space is at a premium, an internal finisher on the C2000 and C5000 series, residing within the device's main body, helps to deliver one of the smallest footprints in its class.

MAXIMUM UPTIME

Expect exceptional reliability, ensuring communication remains fast and efficient day after day. An innovative design feature means that in the unlikely event of a paper misfeed, recovery is always performed from the right hand side of the device - quick and simple.

EFFICIENT MANAGEMENT WITH iWMC

Network management can be handled with Canon's iW Management Console. This powerful, scalable software solution provides extensive capabilities to speed up problem resolution, streamline device control and automate common tasks, reducing the burden on your IT resources. Further help comes courtesy of Canon's eMaintenance software, enabling automated remote diagnostics and consumables ordering.
